## PREFACE

**I**N this complement to the *Concise Oxford French Dictionary*, an effort has been made to include, within a strictly limited compass, the vocabulary and explanations necessary in a practical book of reference. It is designed solely for the convenience of English-speaking users, who wish to write or speak French; and in this respect it differs from the ordinary English-French dictionary which contains many words and explanations needed only by French-speaking readers of English.

Special attention has been given to the general requirements of schools, to commercial phraseology, and to modern war terms. For a handbook of the kind a very full list of animals, flowers, fruits, fish, birds, and insects has been included. The more current medical, military, nautical, literary, sporting, and architectural terms will also be found, together with expressions drawn from modern inventions. I have thought it desirable to add a few Americanisms and slang phrases. Classical derivatives of remote and purely scientific significance have been consistently avoided.

The acquisition of style and language-sense belongs to the province of syntax and composition. But the object of a dictionary should surely be something more than to provide mechanical equivalents to terms in another language. If a word has to be 'looked up', a beginner at any rate wishes to know what to look for and how to look for it—in other words, a dictionary should make direct appeal to constructive thought. In the past this claim has been too often ignored. In many old-fashioned glossaries, synonyms, or what passed for such, were arranged in groups divided by semicolons. The investigator was left to his own beclouded choice as to which term in which group was precisely the one he was seeking. I have endeavoured to lessen this difficulty in the first place by dispensing with all synonyms; secondly by explaining in brackets the exact meaning of words, a method which necessarily has certain limitations where space is of primary consideration.

It has been sufficiently emphasized that a dictionary can have no pretension to fulfil the uses of a grammar. On the other hand there are opportunities in a dictionary for concise grammatical hints of immediate application which, if intelligently implemented, are capable of reducing the inveteracy of

mistakes so familiar to teachers of languages. I have availed myself of these occasions to a larger extent than is perhaps usual. Such hints can serve no further than to stir up memory or to suggest reference, where required, to other sources of information. For this reason examples of constructions have been added only where they seemed inseparable from the note in question.

It is, of course, impossible to find an exact counterpart for every English term in French or in any other language. Cases arise where the English word is highly intensive, differentiated, and unusual. Sometimes it is necessary to translate it by an everyday French word even where the meaning loses much in the process. Sometimes also the French term requires only a careful search. The English word 'comely' is an instance of this kind. The correct translation is often given as *beau* where the French adjective *avenant* almost meets the English on equal terms.

For facility of reference it may be noted that compound expressions consisting of two nouns, two adjectives, or an adjective and a noun occur as a rule under the first of the two elements, unless otherwise indicated. For example, 'bread-fruit' will appear under 'bread', 'sword-knot' under 'sword', compounds of 'self' under 'self', 'sky-blue' under 'sky', 'violet-red' under 'violet', &c. In the case of infinitive phrases such as 'bring grist to the mill', 'keep one's countenance', 'burn the candle at both ends', the phrase will generally be discoverable under the complement rather than under the infinitive on which it depends.

The danger-signal ♣, so opportunely adopted by M. Chevalley to mark words of similar or approximate form but with different meanings in the two languages, meets a like and timely need in this section of the dictionary.

The sign (†) before an aspirate H or Y signalizes that elision and liaison in these cases are impossible. The employment of an asterisk (\*) with all irregular and defective verbs may provide a useful warning.

The letters indicating parts of speech, e.g. *s.*, *adj.*, *v.a.*, are added only where any possible doubt or confusion could arise as to the nature of the part in question.

Since *adjectives* of nationality, in contrast with *nouns* of the same form, are spelt with a small letter in French, I have thought it well to indicate this fact in brackets, e.g. *English, adj. (when an adj. use small letter) and s.m.f. Anglais, -e.*

## PREFACE

v

In conclusion it remains for me to express my gratitude for frequent help in compilation, detail and phrasing to the late M. Chevalley's remarkable work.
